

Safe Vacuum

RELIEF VALVES

When it comes to important perfusion equipment inside the perfusion circuit, our safety valves can perform a critical role for perfusion safety. Our perfusion safety valves are one-way valves that are designed to prevent retrograde flow and protect against negative pressure and other circuit-related hazards when used as intended. With safety and quality as a top priority, we develop and manufacture all safety valves in the USA. Each type of valve is available in both sterile or non-sterile versions.

FEATURES & BENEFITS

- Optimum prevention of negative pressure
- High flow rate
- Reverse flow protection
- Available in both sterile and non-sterile versions
- Manufactured in the USA

SPECIFICATIONS

- Manufactured from ISO 10993-compliant, latex-free materials
- Barbed fittings: 1/4" (6.235 mm)

Safe Vacuum

RELIEF VALVES

OPTIMUM PREVENTION OF NEGATIVE PRESSURE

VRV-II

Sterile: 4003103 | **Non-Sterile:** 4003203

- Negative relief pressure: -150 mmHg
- Positive relief pressure: 340 mmHg (avg.)

VRV-IIC

Sterile: 4004103 | **Non-Sterile:** 4004203

- Negative relief pressure: -150 mmHg
- Positive relief pressure: 340 mmHg (avg.)

RLV-2100B

Sterile: 4103102 | **Non-Sterile:** 4103202

- Negative relief pressure: -200 mmHg @ 2.0 LMP (avg.)
- Positive relief pressure: <1300 mmHg (avg.)
