

Qlinch™

SECUREMENT BANDS

The Qlinch™ securement band provides a better solution for securing and organizing equipment in many hospital environments. They are made from a soft, non-slip material to snugly hold smooth surfaces such as an IV pole or bedrail, and, unlike tape, can be quickly removed without leaving a sticky residue behind.

FEATURES & BENEFITS

- Organize and segregate tubing sets to help reduce mix-ups and line confusion
- Eliminate the need for tape resulting in sticky residue
- The soft, pliable design will not occlude lines
- Safely secures tubing to prevent trip hazards and improve patient mobility
- Strong and designed to be used in multiple applications to fit a variety of needs around all areas of the hospital
 - IV lines (secure MultiPort® Manifolds)
 - ECMO
 - CPB
 - Waterlines
 - Gas and oxygen lines
 - Cables (power, data, etc.)

SECURE & ORGANIZE YOUR EQUIPMENT

- **Safe:** Improve patient safety and mobility. Prevent trip hazards and keep lines off the floor by securing with the Qlinch™ Securement Band.
- **Clean:** Eliminate the need for using tape that leaves behind a sticky residue.
- **Organized:** Allows you to easily segregate and isolate specific lines for use. Write on your Qlinch™ Securement Band to further assist line identification
- **Simple:** Use, re-use¹, and adapt to your specific needs. Strong and durable enough to secure critical components of IV sets and other cords.
- **Solution:** Soft, pliable design will not occlude IV lines or create pressure points
